Call for Papers

The Solar Electric Power Association is now accepting abstracts for consideration for UPEX'01: the Photovoltaic Experience Conference. This is the premier conference presenting the experience base in the use of PV in the marketplace.

Abstracts should be approximately 250 words in length and should include the title of the paper, the name(s) of the author(s), the organization, city, state, postal code, country, phone and fax numbers, and email address.

Conference sessions will be on Tuesday, October 2 and Wednesday, October 3. There will be only one track of sessions, so selection of papers will be limited. However, a poster session may be developed to accommodate additional submissions.

Deadline for submissions:
May 25, 2001

Please note: Speakers are not exempt from meeting registration fees, but will receive a 50% discount.

Papers on the following conference topics will be considered:

1. **Distributed Generation**

What is your experience in using PV as a DG resource? Can PV be partnered with other DG technologies, and what experiences have you had that demonstrate this?

2. **PV for Grid-Support**

What is your experience in using PV for grid-support or as a part of the solution to grid problems?

3. **PV on Buildings**

What have successful installations with building-integrated PV or PV on buildings taught us?

4. **Premium Power**

PV has been successful in several green pricing type programs. Have these really worked and are they sustainable?

5. **The Role of Local Governments, States and Regulators**

How are local governments, states and regulators encouraging the use of PV as part of a balanced energy mix?

6. **Peak Power Supply**

How is PV used to offset peak loads and reduce peak demands?

Send your abstract electronically to:
SolarElectricPower@ttcorp.com

September 30 - October 5, 2001
